Equivalent fractions - lesson source, Grade 4.

Standard: 4.NF.A.1 Explain why a fraction a/b is equivalent to a fraction (n x a)/(n x b) by using visual fraction models.

Students can already name fractions from area models.

Core idea: multiplying numerator and denominator by the same whole number names the same amount on the same whole.

Worked example: a circle shaded to show 1/2, cut in two, now shows 2/4. The shaded area is unchanged.

Practice: paper strips, fraction bars, number lines.

Vocabulary: equivalent, numerator, denominator, whole.
